Garry Smart Fue System at a glance 13

What is the Garry Smart Fue System?

The Garry Smart Fue System is Garry Medical's hair transplant machine for FUE extraction: a dual-screen device that plans the donor area, drives the punch with the motion mode the surgeon has set and shows every graft of the session as it is harvested. It is designed around the FUE workflow and made in Türkiye, alongside the Garry punch line it drives.

The upper screen carries the live view, the lower screen the controls and the preview, and the menu runs through Planning, Session, Community, Education and Settings. Configuration, handpiece, punch compatibility, accessories, availability and pricing are confirmed on the quotation.

01 **Planning**

02 **Session**

03 **Community**

04 **Education**

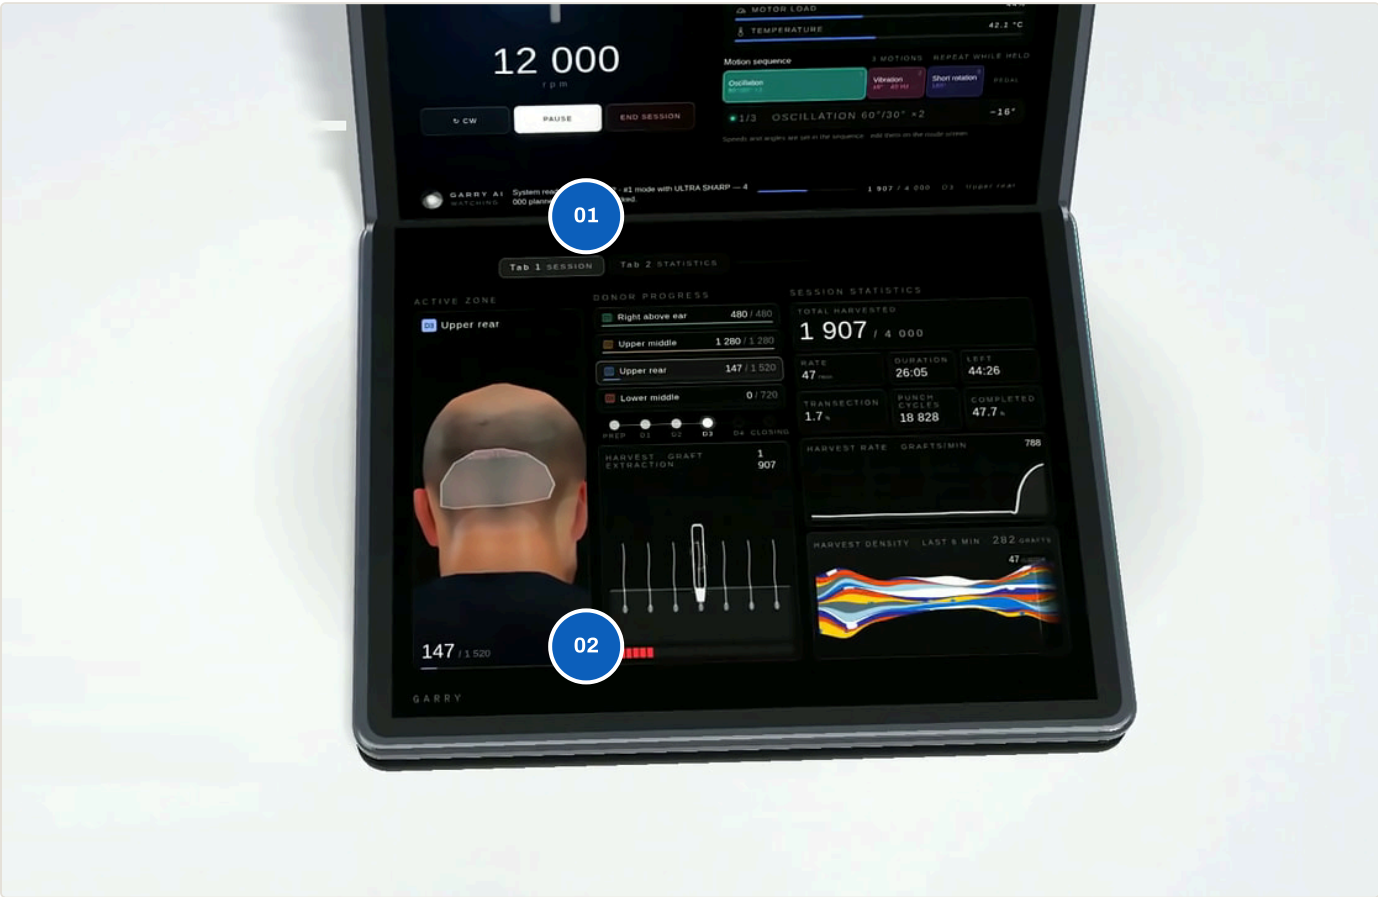

05 **Settings**

> The figures are the settings shown in the product film. Speed, angles, frequency and timing are set per mode on the device.

01 — TOUCH SCREENS, ONE WORKFLOW

Two screens, one workflow

The device opens like a book: the upper screen shows, the lower screen controls. Every step of the FUE session is on one of the two.

01 Upper screen
The live view: the head model, the punch and the running sequence, the session statistics.

02 Lower screen
The controls and the preview: the menu, the mode builder, the zone list, the mode preview before the session starts.

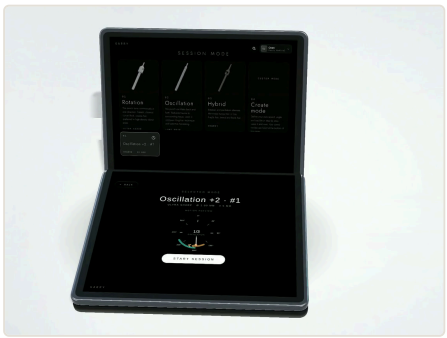

03 Fluid menu
Planning, Session, Community, Education and Settings, each opened from the lower screen.

04 Pedal
Every pedal press runs the mode's sequence; the sequence can repeat for as long as the pedal is held.

Garry Community

02 — PLANNING

Plan. Draw. Start.

The donor area is planned on a 3D head model before the first graft is taken.

4 000

Enter the graft target and the system shares it across the zones; the film shows 4,000 grafts balanced across 4 zones.

01 **Donor area in 3D**

A live head model that rotates and zooms, with the donor zones drawn on it.

02 **Graft target, distributed**

Enter the graft target and the system shares it across the zones; the film shows 4,000 grafts balanced across 4 zones.

03 **Zones drawn with a finger**

Each donor zone is drawn directly on the head and receives its own graft count.

04 **Plan ready**

The marked zones, the target and the per-zone counts are the plan the session follows.

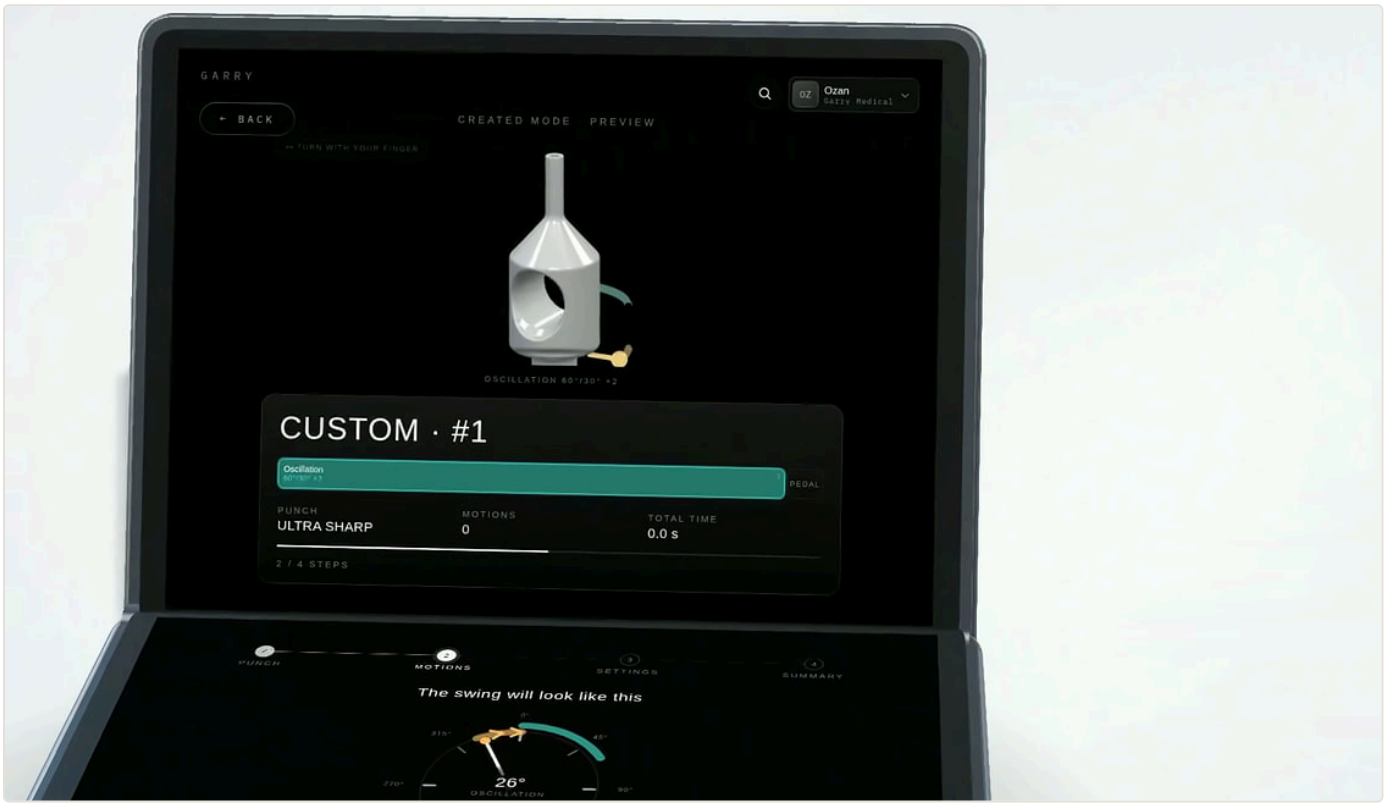

03 — CREATE YOUR OWN MODE

Four motions. Your sequence.

A mode is built in 4 steps: the punch, the motions, the pedal and timing settings, then a summary that saves it.

A MODE IN 4 STEPS

1 Punch	2 Motions	3 Settings	4 Summary

01 Pick the punch, see it live

The chosen punch is shown on the screen, and every motion added is previewed on it before the session.

02 Arrange the motions

Continuous rotation, oscillation, vibration and short rotation are placed in the order you want; they run in sequence on every pedal press.

03 Tap to set the angle

Right and left angles are chosen on a dial with a repeat count, and the preview shows how the punch will swing.

04 Pedal and timing

The pause between motions is set in milliseconds, and the sequence can repeat for as long as the pedal is held.

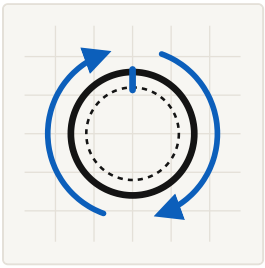

05 Save and use

A finished mode is saved on the device and can be shared with the Garry Community in one tap.

04 — CREATE YOUR OWN MODE

The four motions

The figures are the settings shown in the product film. Speed, angles, frequency and timing are set per mode on the device.

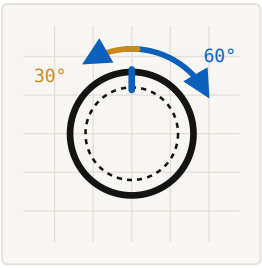

01 / 04

Continuous rotation

12,000 rpm · one direction · continuous

The punch spins in one direction without interruption, a motion for thick, coarse hair.

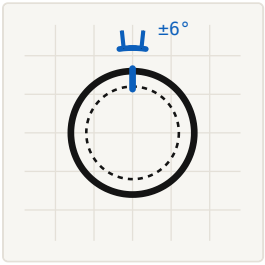

02 / 04

Oscillation

Right 60°, left 30° · repeat ×2

The punch swings back and forth through the set angles, a motion intended for unshaven long hair.

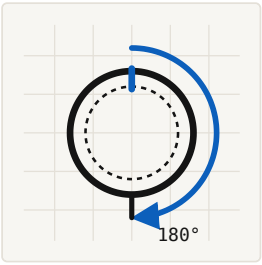

03 / 04

Vibration

±6° · 40 Hz · 300 ms

A short, high-frequency motion designed for a gentle entry of the cutting edge.

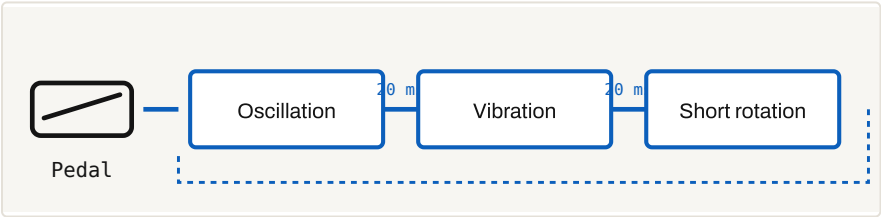

04 / 04

Short rotation

180°, then stop · step by step

The punch rotates through a set angle and stops, for a controlled cut.

THREE MOTIONS, ONE PEDAL

In the film an oscillation, a vibration and a short rotation run in that order on every pedal press, with a 20 ms pause between them, repeating while the pedal is held.

PEDAL AND TIMING

The pause between motions is set in milliseconds, and the sequence can repeat for as long as the pedal is held.

20 ms

Save and use

05 — SESSION MODE

Built-in modes. Or yours.

Rotation, Oscillation and Hybrid come built in; the modes you create sit beside them.

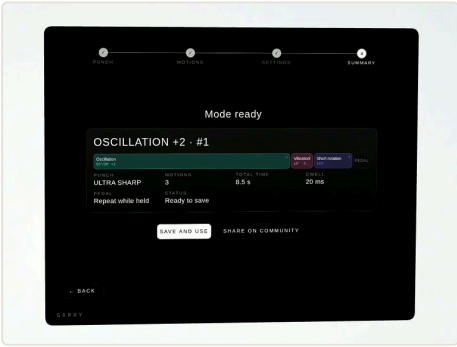

01 **3 built-in modes, plus your own**

The session starts from one of the built-in modes, a mode you created or a profile loaded from the Community.

02 **Preview on the lower screen**

The selected mode is previewed on the lower screen with its punch and motion before Start session.

THE SESSION MODES

01
Rotation
The punch turns continuously in one direction.

02
Oscillation
The punch swings back and forth between the set angles.

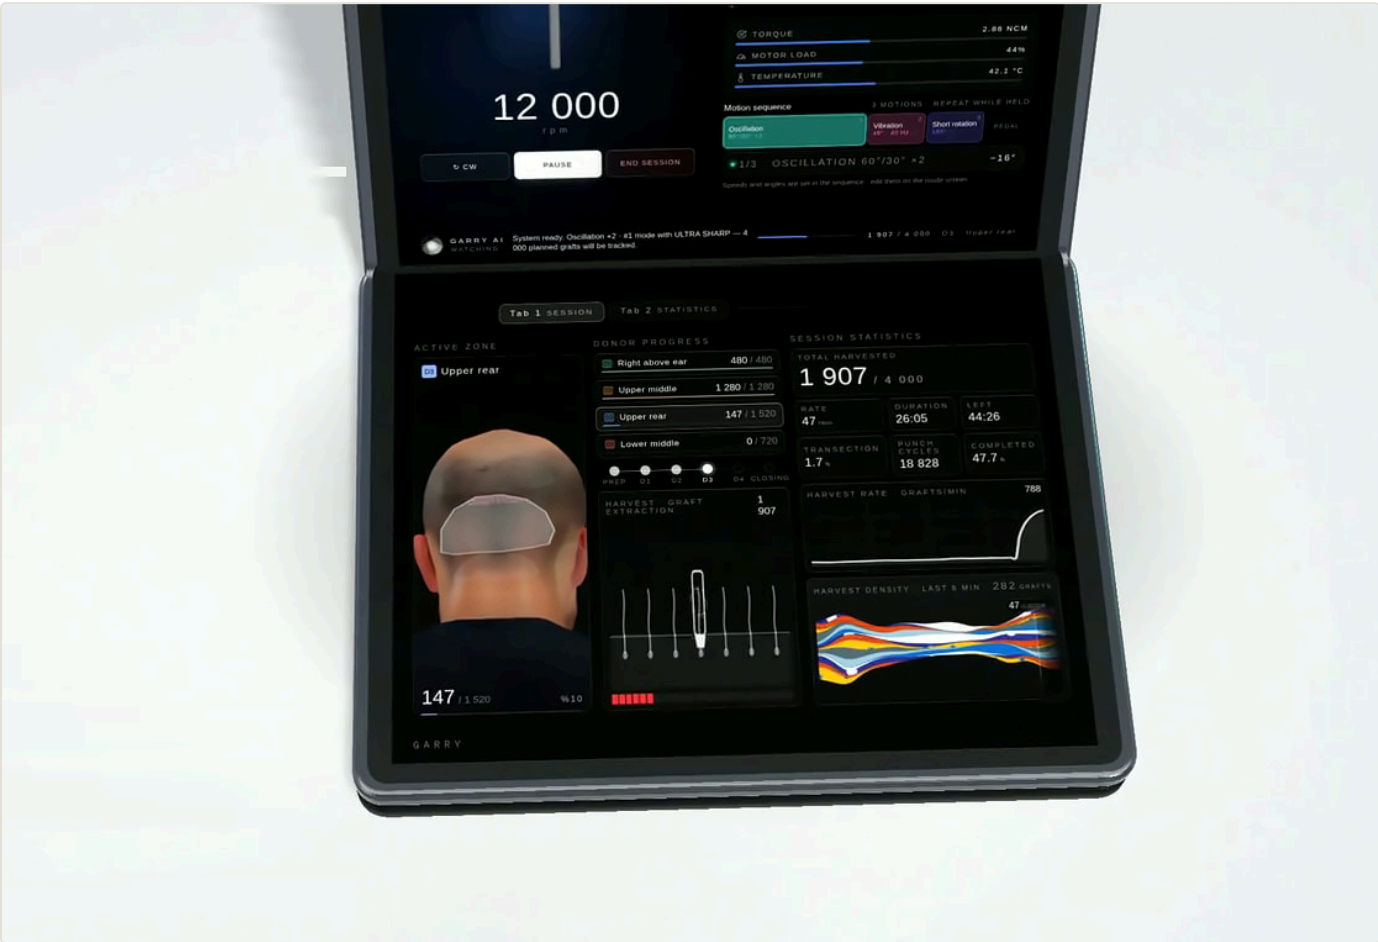

03
Hybrid
Rotation and oscillation combined in one sequence.

04
Create mode
Your own sequence of motions, saved on the device and shared with one tap.

06 — LIVE SESSION

Live. Every graft.

Pedal down, the sequence runs, and both screens follow the session.

SHOWN LIVE WHILE THE SEQUENCE RUNS

Speed	Torque	Motor load	Temperature

01 **The sequence runs**

Speed, torque, motor load and temperature are shown live while the motions run in their order.

02 **Tracked on the head**

The active zone is highlighted on the head model and the harvested grafts are marked on it.

03 **Every graft is counted**

Zone progress, harvest rate, time and the transection rate are counted as the session runs.

ONE SESSION, ONE FLOW

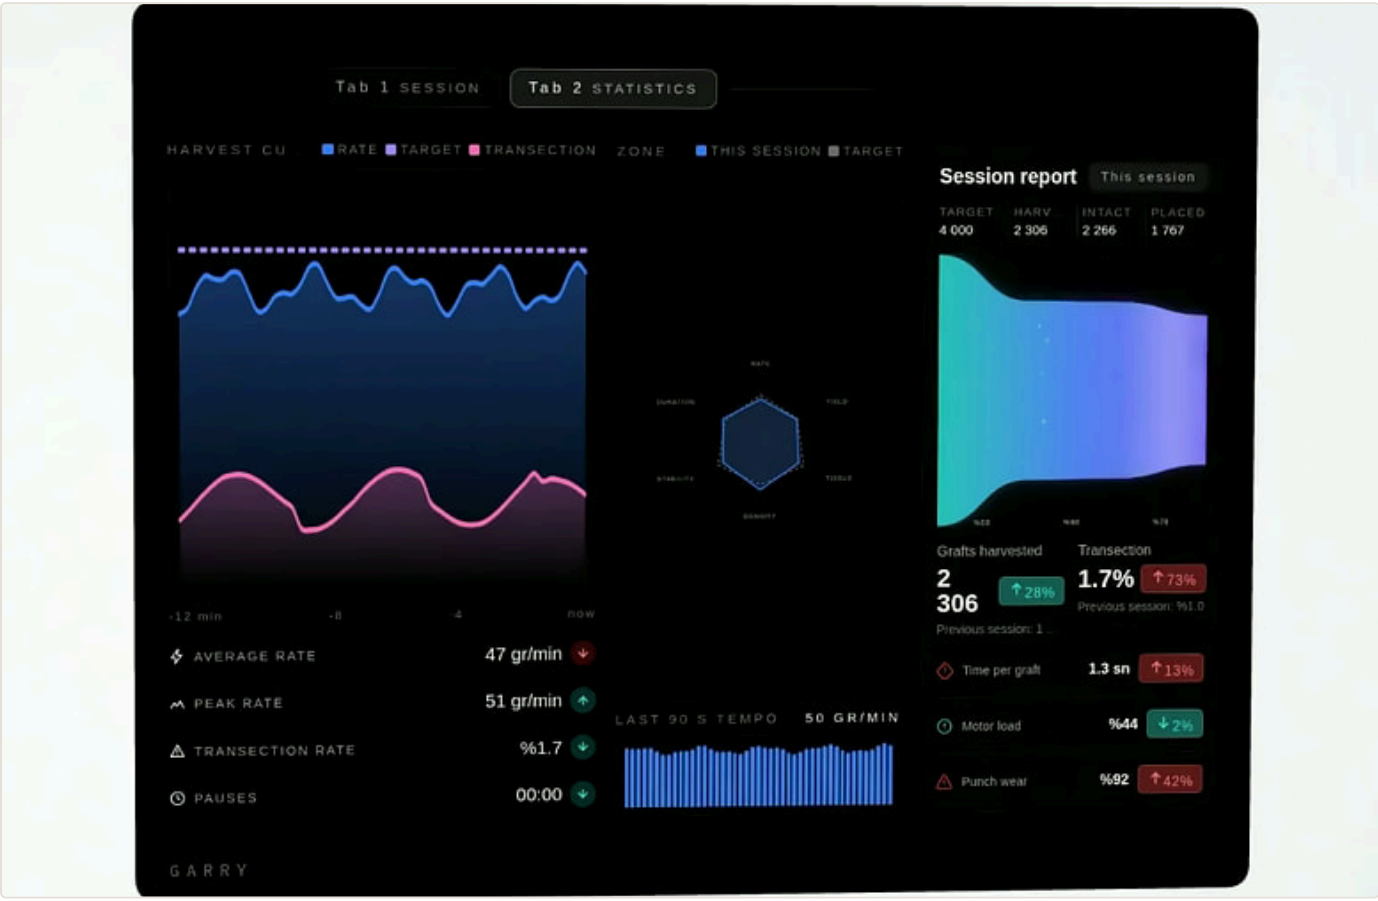

1 Preparation → **2** Donor zones → **3** Closing

Preparation, the donor zones and closing are shown as one flow, at a glance.

07 — LIVE SESSION

Charts in real time

The harvest curve, zone performance, the density matrix, average and peak rate, stability and pauses.

04 **Charts in real time**

The harvest curve, zone performance, the density matrix, average and peak rate, stability and pauses.

05 **Progress zone by zone**

Preparation, the donor zones and closing are shown as one flow, at a glance.

06 **Finish, it is saved**

When the session ends the counters freeze and the report is generated; the session history is kept in one place, each report with a QR code and a PDF.

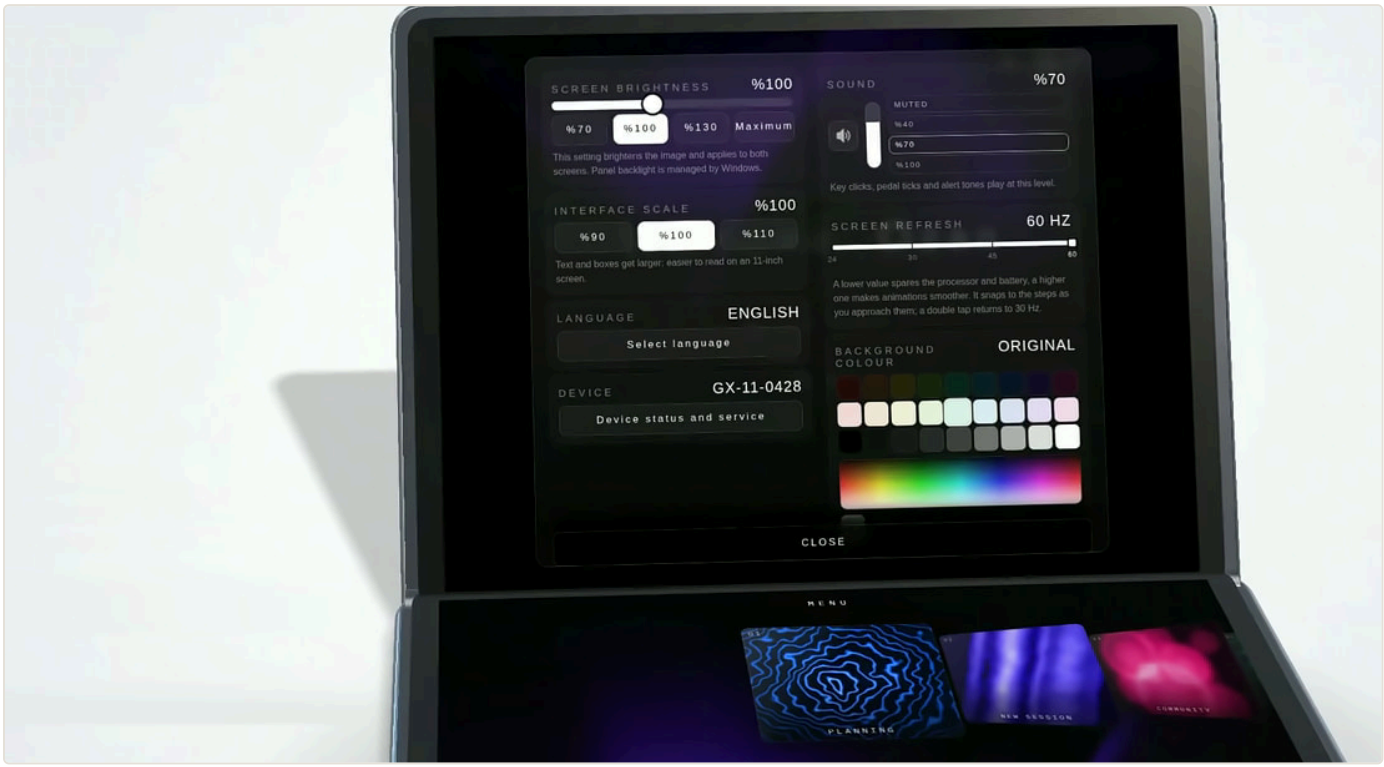

LIVE SESSION

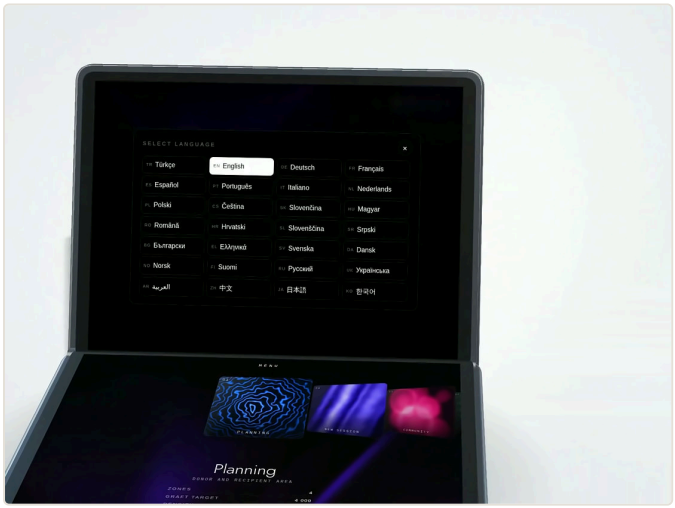

Speed, torque, motor load and temperature; zone progress, harvest rate, time and transection rate; real-time charts; a session report with QR code and PDF

08 — PERSONALISATION

Your colour. Your language.

The interface follows the user, on both screens at once.

01 **Your colour, same contrast**

The background colour is chosen from the palette; the system checks legibility and keeps the tone.

02 **Instantly, both screens**

Mint, Navy and 18 more colours apply to both screens at once.

03 **One touch, 28 languages**

The interface switches language in one touch; English, Deutsch, Türkçe and العربية are among the 28.

28 INTERFACE LANGUAGES

Türkçe · English · Deutsch · Français · Español · Português · Italiano · Nederlands · Polski · Čeština · Slovenčina · Magyar · Română · Hrvatski · Slovenščina · Srpski · Български · Ελληνικά · Svenska · Dansk · Norsk · Suomi · Русский · Українська · العربية · 中文 · 日本語 · 한국어

BACKGROUND COLOURS

Mint **Navy**

and 18 more colours, applied to both screens at once

09 — GARRY COMMUNITY

Surgeon to surgeon.

A surgeon network on the device: profiles, shared processes, discussions and notifications.

01 Experience, shared

Each profile shows the case count, the followers and the processes the surgeon has shared.

02 Ready-made profiles

Shared processes list speed, angle, punch and dwell, rated by other surgeons.

03 Like it, load it

One tap loads a shared profile to the device, where it becomes a session mode.

04 Ask, get answers

Discussions on cases, motion profiles and experience; notifications tell you when the surgeons you follow share something new.

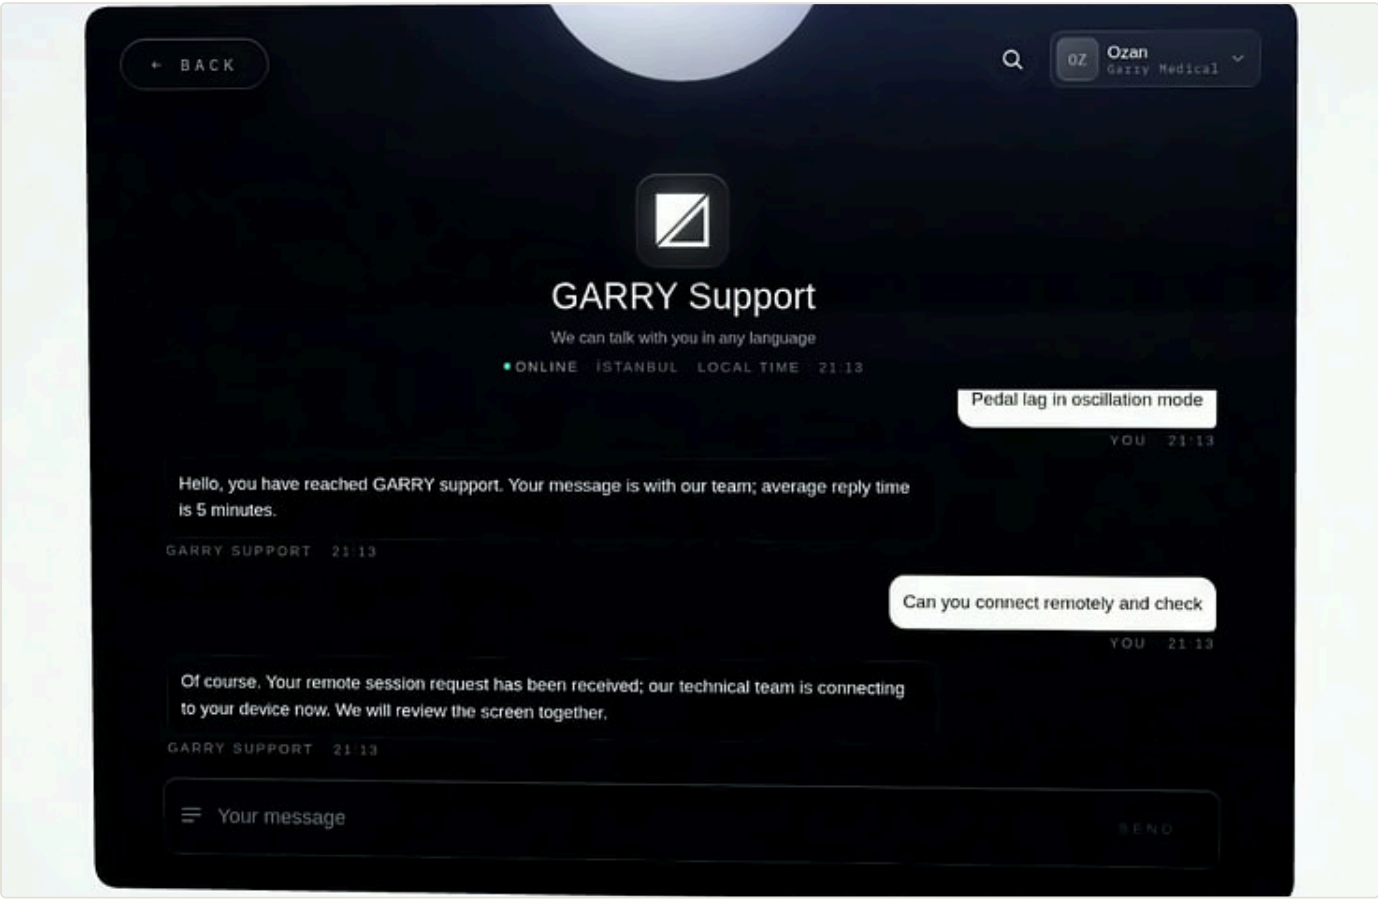

INSIDE THE COMMUNITY

01 Surgeons	02 Processes	03 Discussions	04 Education

10 — HELP AND EDUCATION

Help, one message away.

Support and learning live on the device.

01 **Type, we reply**

A message to Garry Support goes straight from the device, in any language, and the reply arrives on the same screen.

02 **We connect remotely**

On request our technical team connects to the device and reviews the screen together with you.

03 **A library on the device**

Short lessons, right on the device, under Education.

WARRANTY AND UPDATES

1

1-year warranty

The Garry Smart Fue System carries a 1-year manufacturer warranty from Garry Medical.

Automatic system updates

System updates are installed on the device automatically, and the system is developed continuously.

11 — PRODUCT BROCHURE

Garry Smart Fue System at a glance

Our dual-screen FUE system: plan the donor area in 3D, build your own punch motion mode and follow every graft live on the screen.

ITEM	DETAIL
Type	Hair transplant machine for FUE extraction
Screens	2 touch screens, one workflow: the live view above, controls and preview below
Menu	Planning · Session · Community · Education · Settings
Planning	3D head model, donor zones drawn with a finger, the graft target distributed across the zones
Motion types	Continuous rotation, oscillation, vibration, short rotation
Modes	Rotation, Oscillation and Hybrid built in, plus the modes you create and profiles loaded from the Community
Live session	Speed, torque, motor load and temperature; zone progress, harvest rate, time and transection rate; real-time charts; a session report with QR code and PDF
Interface	28 languages and 20 background colours, applied to both screens
Support	Support messages and remote access from the device; a lesson library under Education
Warranty	1-year manufacturer warranty from Garry Medical
Software updates	Installed automatically; the system is developed continuously
Manufacturer	Garry Medical, Türkiye
Configuration and pricing	Handpiece, punch compatibility, accessories, availability and pricing are confirmed on the quotation

HOW TO ORDER

01

Request a quote

Send the quote form on the product page or write to the sales e-mail with your clinic or distribution profile.

02

Configuration and price

We reply within 24 hours on business days. Handpiece, punch compatibility, accessories, availability and price are confirmed on the quotation.

03

Delivery and support

Dispatch is confirmed per order. Support messages and remote access run from the device; the lesson library is under Education.
